

Georeferencing Caracas

formal and spontaneous development around mobility infrastructure

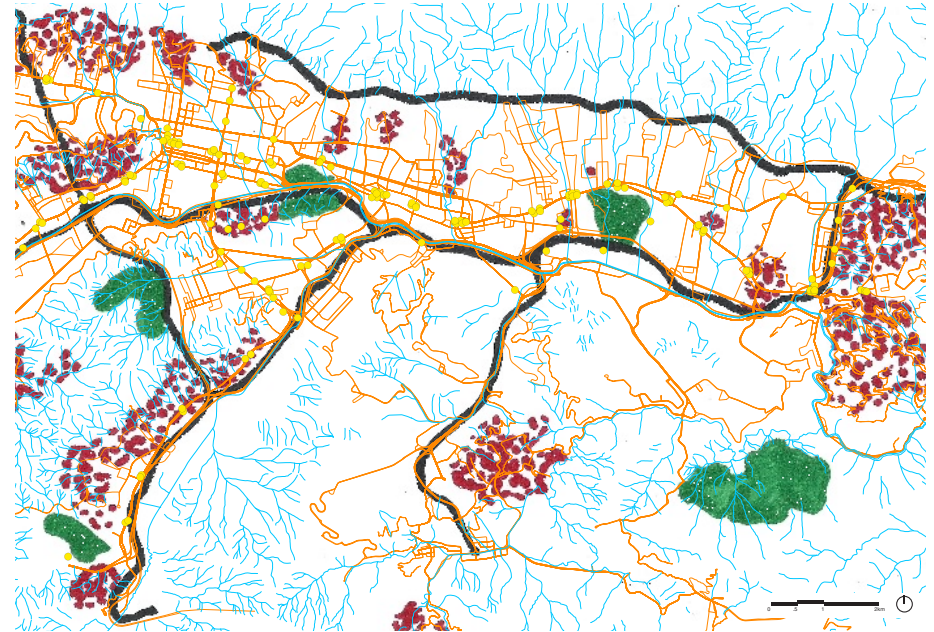

nature and urban structure

Georeferenced drawing of center-east Caracas main roads, rivers and main green areas, overlapped with data on public transportation network, all planned green open spaces and hydrography.

planned green public spaces
public transport network
hydrography
main roads
avila national park

public transport network + main roads + informal settlements

The city's main roads, and informal settlements. The latter are often consolidated around bodies of water and areas of high vulnerability, with limited access to transportation infrastructure.
